Country profile: Orvan

[P1] Orvan is a grain producer with a long coastline and a temperate interior. It grows wheat and maize on a large scale and also produces fertiliser, which is used at home and sold to neighbouring countries.

[P2] The main exports are wheat, maize and fertiliser. The country imports machinery and medicines. Orvan Grain Port is the principal export facility, with silos, bulk loaders and a separate berth for bagged fertiliser.

[P3] Corvan Grain, a grain exporter, is the best-known firm. The port is connected to the interior by road and a short rail spur, and smaller loading points serve growers in the coastal districts.

[P4] Grain is stored in silos at the port and at inland collection points. Smaller berths handle bagged fertiliser, and a coastal road links the port to nearby towns.
